

Projector Arrangement

Abstract

The invention provides a projector arrangement (1) in which an objective cover unit (6) for covering a light exit portion or surface (4e) of an objective unit (4) is adapted to serve as a support or bearing (8) for a projector unit (3) of a projector arrangement (1) in an operation mode. Additionally or alternatively, said projector arrangement (1) comprises a surface region (2a) to be rested on in an operation or projection mode, so as to realize distinct positions and/or orientations for the projection.
